Developer

I am a passionate, creative and committed developer looking to advance my career in a senior/lead level role.

Always looking to expand my knowledge in order to learn new, more efficient ways to get results and keep up with the latest advances in the industry. During downtime, I often find myself playing with new tools and frameworks.

Recently I've tried to be involved within the community as much as possible, helping to organise the Junior Dev meetup, mentoring at SheCodes and sitting on an Advisory Committee for a digital transformation project undertaken by the Perth Football League.

Experience

Cash Converters 2021- Current

So far at Cash Converters, my major deliverables have brought the front end of their website in line with Google's Core Web Vitals seeing a huge improvement (although with some way to go but that is a full rewrite). As well as developing a new payday loan product (currently in trial stages). My proudest achievement so far is convincing the company of the value behind a component library/design system and the benefits that a user finds in a consistent UI. This has lead starting to overhaul their style guide and put together a Design System.

Coding Languages
- HTML, SCSS, JS, .Net/C# (minimal)

Frameworks
- React, jquery, Vue, Angular, Ionic,Storybook

Server
- IIS

Task automation
- webpack
- gulp

CMS used
- Episerver

While I've been at equ I've mainly been working on client SLA on the front end. With some minimal back end tasks thrown in. This includes but not limited to bug diagnosing and fixing, new site features and third party integrations as well as some new site builds and application projects.

Tech Stack used

Coding Languages
- HTML, SCSS, JS, .Net/C#

Frameworks
- React, jquery, Next.JS, Gatsby

Server
- IIS

Task automation
- webpack

CMS used
- Umbraco (primarily), some sitecore and sitefinity

Projects include
- Summithomes (feature additions/updates, adding new features using c# (mainly razor files), react, vanilla js, scss
- woodside brand guidelines (vanilla js single page app, converted with some ui improvements from a wordpress instance
- NWIS (using SCSS, JS, Greensock/GSAP javascript animation framework)
- Inpex (standard brochure type site using scss and js)
- Email development for multiple clients across platforms including Mailchimp, Campaign Monitor and Salesforce

Juicebox Creative – Junior Front End Developer (casual) march 2018- October 2018 My time at juicebox was spent doing a bit of everything including but not limited to EDM Builds

Small site builds

Wordpress maintenance and updates

updates and additions to existing client sites per client request

bringing inherited sites up to date with more modern practices

Debugging

Tech Stack used
Coding Languages
  − Html5, PHP, Javascript/jQuery, Sass
Libraries used
  − Bootstrap, Tailwind, as well as custom developed juicebox sass library
Server
  − Vagrant running custom box based on laravel homestead
Task Automation
  − Predominantly webpack but also gulp and grunt for legacy builds.
Database
 - Mysql

Projects include
- Simple (vanilla js, scss, wordpress)
- Woodside (email development in mailchimp)
- Scitech (Sla updates using js/scss)
- Easifleet (email development with campaign monitor, feature updates/additions using vanilla js/scss)

jpittard.net – freelance web design 2015-present
Web development for small businesses and freelance jobs using up to date stacks.

Whitford Amateuer Football Club – It & Comms October2017 – present
Volunteer position trying to pull the club into the modern age. Currently I am working on a 'Spotify Wrapped' type project for the clubs 50 year celebrations in 2025 as well as a digital onboarding platform for new committee members. I use projects like this to have some creative fun and test out new frameworks.

City Beach Australia 2005-2017
I held many positions within the company. Starting as a casual I worked my way up to stock controller(Water Town, Booragoon and Murray St), duty manager(Water Town and Booragoon) and Store Manager for one of the companies largest stores (Booragoon) as well as the Whitfords store.

Tertiary Education
West Coast Tafe – Diploma of multimedia development.

Skills

FRONT END DEVELOPMENT

HTML5, CSS3, JavaScript, Jquery, WordPress, Mobile First Responsive Design, Cross Browser Compatibility, SASS, Less, PHP, Git, Woocommerce, Grunt/Gulp, React,React Native Greensock animation library, Nextjs, Gatsby,

Other

Jira, Trello, Confluence (also wiki.js), Recently undertook agile training with Zen Ex Machina

Working On

- I am really into the jamstack space currently and working on all skills involved in that area
- typescript

TOOLBOX

Windows 10, vscode, webpack

Work Examples

jpittard.net - currently under construction but have experimented with a minimal holding page using itty.bitty.site where the entire sites content is embedded in the url.

github.com/jeremypittard

Sharing-app-five.vercel.app

- A tool I am working on in nextjs (react) and deploying on the vercel cdn. The tool is for plugin free, code free social media sharing that non technical users can easily take advantage of (will eventually be released as sharellama). Designs and build by myself.

Ocrprojects.com.au

This was one of my earliest wordpress builds, I am looking forward to getting a chance to give this a touch up, focusing on improving the work gallery ui, form ui and site speed. By converting this to a headless/decoupled version of wordpress and building the front end with nextjs. (a mostly complete can be seen here https://ocr-frontend-swart.vercel.app/, front end was built with nextjs and backend is wordpress)
